"Nuclear is News. News should be treated as Nuclear."

Why Federated Learning Matters

The Nuclear Insight

In nuclear: data is sovereign.
Verified. Uncorruptable. Strict
PASS/FAIL. No grey area.

The Revelation

Why aren't we this scientific with
NEWS?

The 1996 Telecommunications Act
says news must be
ENTERTAINING — not fact-driven.

We decided to build the
**infrastructure of truth the law
never required.**

"Data must remain sovereign. Verified. Uncorruptable. And still useful."

Magic Lens: Verified Intelligence at the Point of Need

New York time MeontonAI: Consensus (bate: on-painted to nature

Architecture: Four Federated Layers of Intelligence

Immutable Audit Trail

- **Top Layer:** Knowledge Graph (Interconnected Semantic Web)
- **Third Layer:** Expert Network (Human-in-the-Loop Verification)
- **Second Layer:** Private / Enterprise (Structured, Secure Data Blocks)
- **Bottom Layer:** Public Web (Scattered Nodes & Raw Data)

Early Wins. Real Contracts. Accelerating Pipeline.

Contract Growth

- **Government Contract:** \$250K Active
- **Quote Submitted:** \$1.7M
- **Nuclear Client #2:** Active Discussion
- **Google AI Futures Fund:** Invited to Present

A \$200B+ Market Waiting for Verified Intelligence

- **Nuclear: \$1B** (Energy, DOE)
- **FinTech: \$5B** (PulseATLAS)
- **AI Search: \$200B** (Consumer Magic Lens)

This Is What Verified Intelligence Looks Like.

TE-201B	Core Inlet Temperature — Cold Leg	°F	≤ 550	536.2	541.0	NORMAL
FE-301	Primary Coolant Flow Rate	gpm	≥ 14,200	14,820	15,100	NORMAL
NI-401	Neutron Flux — Wide Range (ex-core)	% FP	≤ 105	98		
NI-402	Neutron Flux — Power Range (in-core)	% FP	≤ 105	97		
LE-501	Pressurizer Water Level	% span	17–93	62		

Per 10 CFR 50.72(b)(3)(ii)(B), the sensor readout summary for the previous surveillance interval for primary coolant loop instrumentation (sensors PT-101A/B, TE-201A/B, FE-301, NI-401/402, LE-501) indicates **The plant safety design includes an emergency core cooling system to mitigate loss-of-coolant accidents.** This data has been reviewed by the Hadron Reactor Engineering group and is submitted in accordance with NUREG-1022, Rev. 3.

PAGE 5-13 5.2.2 Passive Safety System Actuation — ECCS Surveillance

5.2.2.1 EMERGENCY CORE COOLING SYSTEM — PASSIVE INJECTION SURVEILLANCE

The Hadron MMR-Alpha Emergency Core Cooling System (ECCS) relies on passive natural circulation for core cooling. Surveillance testing is conducted per Technical Specification 5.2.2.1. The following table summarizes the most recent ECCS valve actuation and injection flow surveillance results.

TEST ID	SYSTEM	TEST DATE	ACCEPTANCE CRITERION
SV-ECCS-	Emergency Core Cooling System	2024-11-	100% CFS

Ask: Participate in a \$10M Seed Round Investment

15% Equity · \$66M Post-Money Valuation · Sovereign, verified intelligence for highly regulated verticals

This Seed round deploys hardware infrastructure, regulatory compliance, and specialized talent to make Magic Lens enterprise-ready in Nuclear, Clinical, FinTech, and Government verticals.

FUND DEPLOYMENT ROADMAP

\$10M Seed Round — Funds Will Complete

- **\$4M Hardware:** 5 sovereign colocation data centers for federated AI inference
- **Innovation Pods:** Per highly regulated vertical (Nuclear, Clinical, FinTech, Gov)
- **Compliance & Regulatory:** Deep standards integration (10 CFR 50, HIPAA, SOC2, FedRAMP)
- **Key Partnerships:** Co-sell motions with John Snow Labs — unstructured clinical data & handwritten notes sentiment analysis for Magic Lens
- **Team:** Ex-Flower AI offshore hires — Computer Vision, Hardware, DevOps/SRE
- **Nuclear Specialists:** 2 hires — Nuclear Sentiment Analyst & Nuclear Physics AI Engineer

Why a \$66M Post-Money Valuation?

- Sovereign hardware infrastructure across 5 regulated colocation centers — immutable data moat
- Compliance-ready for Nuclear (NRC/DOE), Clinical (HIPAA), and Government (FedRAMP) verticals
- Strategic co-sell partnerships expanding TAM to \$200B+ AI infrastructure market
- Active government contract (\$250K), \$1.7M quote submitted, Nuclear Client #2 in active discussion
- Google AI Futures Fund — invited to present; \$300K GCP credits + NVIDIA partnership secured
- Transition to enterprise commercial scale ahead of Series A

Pricing Strategy: Sovereign & Verified Intelligence

Tailored for Highly Regulated Enterprise Verticals · Nuclear · Clinical · FinTech · Government

Our pricing scales with enterprise sovereignty requirements — from innovation pod pilots to full dedicated colocation deployments with human-in-the-loop expert verification.

PRICING TIER PROGRESSION

Revenue Model Breakdown

> Infrastructure Fee:

Base charge for dedicated sovereign colocation (per center)

> Software License:

Per-seat or enterprise license for Magic Lens Co-Processor

> Expert Verification:

Tiered usage billing for Human-in-the-Loop SME routing

> Data Integrations:

Co-sell modules — John Snow Labs clinical sentiment analysis for handwritten notes

> Compliance Modules:

Add-on regulatory packages (NRC, HIPAA, FedRAMP, SOC2)

Vertical Pricing Anchors

> Nuclear (DOE/NRC):

\$500K–\$1M+/yr — dedicated colocation + physics AI specialist + compliance

> Clinical / Healthcare:

\$250K–\$750K/yr — HIPAA-compliant unstructured data + sentiment analysis

> FinTech (PulseATLAS):

\$250K–\$500K/yr — risk intelligence + verified knowledge graph

> Government / Defense:

\$500K–\$2M+/yr — FedRAMP sovereign deployment + expert routing

> Consumer (Magic Lens):

SaaS freemium → \$29–\$199/mo per user

Why This Pricing Model Wins

> Aligns with strict data sovereignty & compliance requirements of regulated enterprise buyers

> Hardware colocation creates high switching costs and durable recurring revenue moats

> Expert network usage scales naturally with enterprise adoption — land-and-expand motion

> Co-sell partnerships (John Snow Labs, Google, Supermicro, NVIDIA) accelerate pipeline without direct sales cost

> SOM of \$21M–\$46M (Nuclear & Critical Infrastructure) alone justifies the \$66M seed valuation
