

Building the **Trust** Infrastructure **for the AI Era**

AI answers are **replacing search**.

But the infrastructure to **verify those answers** doesn't exist yet.

MAGIC LENS

PULSEFINE™

TRUST GRAPH

PROVENANCE ENGINE

Stephanie Joyce · Founder & CEO, PulseDNA · pulsednafederatedai.com

AI Has a Trust Problem

The world's most powerful AI systems generate confident answers — with **no verifiable provenance**.

SYSTEMS WITHOUT CREDIBILITY LAYERS

- OpenAI — GPT-4, ChatGPT
- Google — Gemini, AI Overviews
- Anthropic — Claude
- Meta — LLaMA ecosystem

HIGH-RISK SECTORS EXPOSED

- | | |
|----------------------|---------------------|
| ● Journalism | ● Finance |
| ● Research | ● National Security |
| ● Nuclear Compliance | ● Regulatory Law |

THE INFRASTRUCTURE GAP

SSL / TLS
Solved identity for the web in 1994

AI Credibility Layer
Still doesn't exist in 2026

*"The internet solved identity with SSL.
AI still hasn't solved credibility."*
— The infrastructure gap **PulseDNA** closes

Search Is Becoming AI

For 25 years we searched the web. Now we **ask AI directly**. The interface to knowledge has changed — but the credibility layer hasn't.

THE TRANSITION

MARKET SIGNALS

\$1.8T

AI market by 2030

62%

of searches now AI-assisted

\$0

spent on AI credibility infra

∞

hallucination liability exposure

THE INFRASTRUCTURE GAP IS NOW

- AI answers replace authoritative sources in real-time
- No provenance chain exists between AI output and source
- Governments are legislating AI accountability globally
- Enterprise buyers are demanding verifiable AI outputs

This is the infrastructure gap. PulseDNA builds the layer that closes it.

PulseDNA Builds the **Credibility Layer** for AI

Magic Lens transforms AI responses into **verifiable, traceable knowledge** — with full citation chains and source credibility scoring.

MAGIC LENS VERIFICATION CHAIN

WHAT MAGIC LENS DELIVERS

- **Federated AI processing** — no data leaves your environment
- **Real-time provenance verification** — millisecond trust scoring
- **Compliance-grade auditability** — every decision traceable
- **API-first architecture** — integrates with any AI system
- **Sovereign deployment** — air-gapped for critical infrastructure

THE KEY DIFFERENTIATOR

"Search engines indexed the web.
PulseDNA verifies it."

We are not building a search engine. We are building a **co-processor for human reasoning** — one that ensures every AI-generated answer is grounded in the best available verified knowledge.

Magic Lens Trust Infrastructure

A layered, event-driven architecture built for **real-time provenance verification at internet scale.**

WHY EVENT STREAMING MATTERS

- Trust signals update in **real time** as content is published
- Kafka-style architecture enables **millions of signals/day**
- Distributed design ensures **no single point of failure**
- Horizontally scalable to **global internet scale**

INFRASTRUCTURE COMPARABLES

PulseDNA operates at the same infrastructure layer as:

Snowflake

Databricks

Palantir

Confluent

These companies built **data infrastructure platforms** that became foundational layers of the enterprise stack. PulseDNA builds the equivalent for **AI trust and credibility.**

"The objective function is different from search.
We optimize for verifiable provenance — not relevance ranking."

LIVE TRUST PIPELINE

- AI answers reflect **current credibility state** — not stale training data
- Misinformation flagged **before it propagates** through AI systems
- Regulatory submissions backed by **live, auditable provenance**
- Enterprise AI deployments gain **continuous compliance coverage**

source

- verification
- trust score
- API response

This thin-slice demo loop is fully operational. Every expansion of the network compounds the trust graph value — creating a **data network effect** that grows stronger with each new source integrated.

This creates a real-time trust signal network.

The architecture is serious. The moat is the data.

Trust-as-a-Service

Magic Lens exposes a developer-first API platform that becomes **trust infrastructure for the entire AI ecosystem.**

MAGIC LENS API SURFACE

POST	/verify	// Verify any AI-generated claim
GET	/source_score	// Publisher credibility score
GET	/citation_chain	// Full provenance trace
GET	/trust_signal	// Real-time trust graph signal
POST	/claim_check	// Fact-check against trust graph
GET	/lineage	// Document origin + history
POST	/compliance_audit	// Regulatory submission package

DEVELOPER PLATFORM POSITIONING

Any AI developer, enterprise, or government can integrate Magic Lens via API — adding a **trust layer to their existing AI stack** without rebuilding infrastructure.

WHO INTEGRATES MAGIC LENS

- **AI Developers**
Add trust verification to LLM outputs · Reduce hallucination liability · Ship credible AI products
- **Governments & Regulators**
AI accountability mandates · Regulatory compliance tooling · National security intelligence verification
- **Research Institutions**
Citation verification · Peer review integrity · Reproducibility infrastructure
- **Financial Analysts & Media**
Verified financial intelligence · Newsroom fact-checking · Misinformation detection at scale

"This becomes infrastructure for the AI ecosystem — the same way AWS became infrastructure for the internet."

— The platform vision

A Global Trust Signal Network

Zoom out. What we're really building is a **global credibility graph for the internet** — the trust layer AI has always needed.

SIGNALS FEEDING THE TRUST GRAPH

PulseDNA Global Trust Graph
The credibility layer for the internet

THE DATA NETWORK EFFECT

- More sources → **richer trust graph**
- Richer graph → **more accurate credibility scores**
- Better scores → **more enterprise customers**
- More customers → **more signal sources**

This is a flywheel. The trust graph becomes the moat.

HISTORICAL PARALLEL

"Over time, the trust graph becomes a global credibility graph for the internet. That's not a product. That's infrastructure."

— The \$10B+ vision

Infrastructure Platform Economics

Multiple compounding revenue streams — built on the same economic model as the **most valuable data infrastructure companies ever built.**

REVENUE STREAMS

 **API Usage (Metered)**
Per-call pricing for /verify, /trust_signal, /claim_check

Usage

 **Enterprise Compliance Tools**
Annual SaaS license · Nuclear, Finance, Gov verticals

\$250K-\$1M+

 **AI Verification Layer**
Embedded trust layer for AI developer platforms

Rev Share

 **Government Licensing**
Sovereign deployment · Air-gapped · Multi-year contracts

\$5M-\$15M

 **Developer Platform Integrations**
Co-sell motions · Partner ecosystem · Marketplace

Platform

Land-and-expand model: Phase 1 pilots (\$50K-\$200K) convert to multi-year enterprise contracts (\$1M+) as trust graph value compounds with usage.

INFRASTRUCTURE COMPARABLES

- Snowflake
- Databricks
- Palantir
- Confluent

These companies built foundational data infrastructure platforms. Each started with a specific vertical use case and expanded to become **category-defining infrastructure**. PulseDNA follows the same trajectory — starting with nuclear and critical infrastructure compliance, expanding to the global AI trust layer.

WHY THIS MODEL COMPOUNDS

- API usage grows with AI adoption — **secular tailwind**
- Trust graph value increases with every new source — **data flywheel**
- Compliance mandates create **non-discretionary spend**
- High switching costs once trust graph is integrated — **sticky**
- Government contracts provide **long-duration revenue**

\$50K
Phase 1 entry

\$1M+
Enterprise contract

\$15M
Gov/sovereign deal

Start With High-Trust Industries

Early traction comes from sectors where **verified knowledge is non-negotiable** — where the cost of an AI hallucination is catastrophic.

INITIAL TARGET VERTICALS

Nuclear Energy Compliance

BEACHHEAD MARKET · Active engagement

NRC licensing acceleration · 10 CFR Part 50 · NUREG-0800 · Hadron Energy partnership in progress

Financial Analysis

HIGH-VALUE · Regulatory pressure

SEC compliance · Earnings verification · Investment research integrity · Bloomberg integration

Research Institutions

CREDIBILITY · Citation integrity

Peer review verification · Reproducibility · Academic fraud detection · Grant compliance

Government Intelligence

SOVEREIGN · Air-gapped

National security · Intelligence verification · Policy analysis · SAM.GOV registered

THE GTM MOTION

- **Phase 1 Pilot** — \$50K–\$200K/yr
No infrastructure commitment. Value in days–weeks.
- **Expand to Enterprise** — \$250K–\$1M/yr
Full compliance tooling + API integration.
- **Sovereign Deployment** — \$5M–\$15M
Air-gapped PulseFINE™ infrastructure build.
- **Platform Network** — Revenue share
Developer ecosystem + co-sell partnerships.

CURRENT TRACTION

- Google AI Futures Fund — recognized
- NVIDIA partnership — active
- Hadron Energy — product demo completed
- Supermicro — hardware co-sell motion
- SAM.GOV registered · SBA certified

"Compliance is the fastest path to revenue. Once we're embedded in the compliance workflow, we become infrastructure."

— GTM strategy principle

PulseDNA's Unfair Advantage

Five compounding moats — each one independently defensible, collectively insurmountable.

Trust Graph Data Network

The real long-term moat. Every new source integrated makes the graph more accurate. Competitors cannot replicate years of accumulated trust signal data.

PRIMARY MOAT

Real-Time Provenance Verification Engine

Millisecond trust scoring at scale. Event-streaming architecture with Kafka-style pipelines. Built for internet-scale throughput from day one.

TECHNICAL MOAT

API Platform for AI Credibility

First-mover developer platform for trust verification. Once integrated into AI stacks, switching costs are extremely high. Network effects compound.

PLATFORM MOAT

Deep Regulated Vertical Expertise

Nuclear, government, and financial compliance knowledge is not replicable quickly. Domain expertise + regulatory relationships create durable competitive advantage.

DOMAIN MOAT

Patent-Pending Trust Verification Interface

Provisional patent filed around the verification interface. The IP protects the interaction model while the trust graph dataset becomes the real long-term barrier.

IP MOAT

"Over time the trust graph becomes the moat. It's a data asset that compounds with every signal, every source, every customer."

— Why this is winner-take-most infrastructure

The Timing Is Perfect

Three forces are converging simultaneously — creating a **narrow window to build the foundational trust layer** before it becomes a commodity.

01

AI Hallucination Crisis Is Mainstream

NYT, WSJ, congressional hearings. The credibility problem is no longer academic — it's front-page news and creating enterprise liability. The market now understands the problem.

DEMAND SIGNAL

02

AI Answers Are Replacing Traditional Search

Google AI Overviews, ChatGPT, Perplexity. The interface to knowledge has shifted. Every AI answer delivered without provenance is a liability waiting to materialize.

MARKET SHIFT

03

Governments Are Demanding AI Accountability

EU AI Act. US Executive Order on AI. NIST AI RMF. Regulatory mandates are creating non-discretionary compliance spend across every regulated industry globally.

REGULATORY TAILWIND

"If AI becomes the interface to knowledge, credibility becomes the most valuable layer.

PulseDNA builds that layer."

— The one sentence that changes the conversation

THE WINDOW IS NOW

- Infrastructure categories are **winner-take-most** — first movers compound
- Trust graph data is a **time-sensitive asset** — early accumulation matters
- Regulatory relationships take **years to build** — PulseDNA has them now
- The category is being defined **in the next 18 months**

The Minds Behind Magic Lens

Problems come looking for you — when you have the experience to solve them.

Stephanie Joyce
CEO & FOUNDER

Ex-Apple · DOE R&D · MIT Research. Saw the pattern: nuclear compliance is the last frontier untouched by verified AI. Built PulseDNA to close that gap.

"We are not building a search engine. We are building a co-processor for human reasoning — one that ensures every decision made at a nuclear facility is grounded in the best available verified knowledge. Magic Lens gets you there in weeks. PulseFINE™ gets you there forever."

— Stephanie Joyce, Founder & CEO, PulseDNA

Ask: Participate in a \$10M Seed Round Investment

15% Equity · \$66M Post-Money Valuation · Sovereign, verified intelligence for highly regulated verticals

This Seed round deploys hardware infrastructure, regulatory compliance, and specialized talent to make Magic Lens enterprise-ready in Nuclear, Clinical, FinTech, and Government verticals.

FUND DEPLOYMENT ROADMAP

\$10M Seed Round — Funds Will Complete

- > **\$4M Hardware:** 5 sovereign colocation data centers for federated AI inference
- > **Innovation Pods:** Per highly regulated vertical (Nuclear, Clinical, FinTech, Gov)
- > **Compliance & Regulatory:** Deep standards integration (10 CFR 50, HIPAA, SOC2, FedRAMP)
- > **Key Partnerships:** Co-sell motions with John Snow Labs — unstructured clinical data & handwritten notes sentiment analysis for Magic Lens
- > **Team:** Ex-Flower AI offshore hires — Computer Vision, Hardware, DevOps/SRE
- > **Nuclear Specialists:** 2 hires — Nuclear Sentiment Analyst & Nuclear Physics AI Engineer

Why a \$66M Post-Money Valuation?

- > Sovereign hardware infrastructure across 5 regulated colocation centers — immutable data moat
- > Compliance-ready for Nuclear (NRC/DOE), Clinical (HIPAA), and Government (FedRAMP) verticals
- > Strategic co-sell partnerships expanding TAM to \$200B+ AI infrastructure market
- > Active government contract (\$250K), \$1.7M quote submitted, Nuclear Client #2 in active discussion
- > Google AI Futures Fund — invited to present; \$300K GCP credits + NVIDIA partnership secured
- > Transition to enterprise commercial scale ahead of Series A

Pricing Strategy: Sovereign & Verified Intelligence

Tailored for Highly Regulated Enterprise Verticals · Nuclear · Clinical · FinTech · Government

Our pricing scales with enterprise sovereignty requirements — from innovation pod pilots to full dedicated colocation deployments with human-in-the-loop expert verification.

PRICING TIER PROGRESSION

Revenue Model Breakdown

- > **Infrastructure Fee:** Base charge for dedicated sovereign colocation (per center)
- > **Software License:** Per-seat or enterprise license for Magic Lens Co-Processor
- > **Expert Verification:** Tiered usage billing for Human-in-the-Loop SME routing
- > **Data Integrations:** Co-sell modules — John Snow Labs clinical sentiment analysis for handwritten notes
- > **Compliance Modules:** Add-on regulatory packages (NRC, HIPAA, FedRAMP, SOC2)

Vertical Pricing Anchors

- > **Nuclear (DOE/NRC):** \$500K–\$1M+/yr — dedicated colocation + physics AI specialist + compliance
- > **Clinical / Healthcare:** \$250K–\$750K/yr — HIPAA-compliant unstructured data + sentiment analysis
- > **FinTech (PulseATLAS):** \$250K–\$500K/yr — risk intelligence + verified knowledge graph
- > **Government / Defense:** \$500K–\$2M+/yr — FedRAMP sovereign deployment + expert routing
- > **Consumer (Magic Lens):** SaaS freemium → \$29–\$199/mo per user

Why This Pricing Model Wins

- > Aligns with strict data sovereignty & compliance requirements of regulated enterprise buyers
- > Hardware colocation creates high switching costs and durable recurring revenue moats
- > Expert network usage scales naturally with enterprise adoption — land-and-expand motion
- > Co-sell partnerships (John Snow Labs, Google, Supermicro, NVIDIA) accelerate pipeline without direct sales cost
- > SOM of \$21M–\$46M (Nuclear & Critical Infrastructure) alone justifies the \$66M seed valuation
